Scope of conference

Changing conditions of general economy in the sector of food technology and growing, nowadays, the consumer awareness pose the new challenges to the manufacturers of foodstuff. The consumers' expectations for transparency and more innovative food products, as well as ever-evolving requirements for quality and compliance with the law are forcing changes in food processing. The implementation of modern technological solutions and modification of the existing ones become essential in the face of an increasingly clear trend of obtaining of more ecological food sources and minimizing negative influence of food processing on the environment.

In the light of the above, the aim of the conference is to present by its participants the latest scientific and technological achievements in the field of food technology and human nutrition, as well as to exchange of views and experiences of employees of scientific units and representatives of the food industry and food quality control units.

The topics of the conference will include:

- *Contemporary trends in food production, packaging and distribution;*
- *Food and environmental sustainability;*
- *Quality and health safety of food;*
- *Food biochemistry and biotechnology;*
- *Functional food ingredients;*
- *Food and human health;*
- *Other related topics.*

During the conference there will be a possibility to get acquainted with the FoodInovo – a common Erasmus Plus project performed by four universities.
